Text Planetary communities with anticipatory capacities (in process)

HYPOTHESIS

We can integrate planetary communities if they are formed in anticipatory capacities as opportunities to understand unexpected phenomena and events that arise, education plays a fundamental role, which is why having tested this in formal and informal courses has been a way to validate the project.

PLANETARY COMMUNITY

It is the one that is integrated into global connections, with common objectives that preserve the idea of initially striving for the objectives of sustainable development. They are communities that are integrated with holistic, heuristic and syncretic ideas and develop strategic thinking that allows them to build alternative futures and shape a planetary consciousness

IN TERMS OF EDUCATION

Planetary consciousness refers to perceiving and working to understand the eco-systemic problems that exist in the world where each action has repercussions on the others and has to do with a human being who has the same status as other living beings.

We give several sessions to different audiences, both national and international, to different specialties and to public officials.

They had close contact with several Latin American countries in a meeting where they discussed what has been done and the future that can be built for the region.

Work team:
Dra. Guillermina Baena Paz, Dr. Sergio Montero, Mtra. Hilda Bustamante, L.A. Patricia Baena Paz, Mexico City
